

Helping You Heal: Your Guide to Wound Care

Diabetic Foot Ulcers

The Program

This booklet will help you:

- Manage your wound at home,
- Improve and maintain your health and quality of life,
- Prevent new wounds.

You can use this booklet and the accompanying passport to:

- Keep track of information about your care,
- Guide your day-to-day wound care,
- Know when you need to call your care team,
- Ensure that your wound is being managed in the best way possible.

Your team looks forward to working with YOU to Heal/Take Control of Your Wound.

You have developed some personal goals, and your passport is your tool to keeping track of them, and your care, as you begin managing your wound at home.

To heal your wound you will need to take care of yourself and pay attention to your body, but it does not mean you need to stop doing the things you love to do. This booklet is here to help you!

Keep this booklet and your passport nearby, in a convenient spot, so you can refer to them and make notes about your healing journey. It helps to know a bit more about your particular wound.

Diabetic foot ulcers

You have a diabetic foot ulcer, a type of wound caused in people with diabetes for a number of reasons.

The loss of sensation in your feet caused by diabetes can result in unnoticed pressure or injury. Incorrect footwear can increase the pressure on your feet, which you cannot feel. Normal injuries like nicks, cuts, bruises or blisters may go unnoticed and progress into ulcers. Then, the lack of blood flow caused by the diabetes decreases the body's ability to heal. Smoking increases this risk as it diminishes blood flow to the extremities.

Diabetic foot ulcers are often painless, but may take weeks or even several months to heal, and are the most common reason for hospital stays for people with diabetes. Left untreated, they are a common cause for surgical amputations.

Managing Your Diabetic Foot Ulcer

Knowing what caused your arterial ulcer and your risk factors will help you manage your wound and prevent future arterial ulcers from forming. In order to be YOUR healthiest, you should:

1. Monitor and control your sugars. Your nurse can help you learn to do this.

2. Wear properly fitting shoes and socks. Your nurse may refer you to a chiropodist for special footwear. This will ensure your feet are not under pressure.

3. Try not to go barefoot. Since diabetics often can't feel their feet, going barefoot is dangerous. Always wear your shoes or slippers.

4. Eat a balanced diet, high in protein, which keeps your skin strong and helps wounds heal. Our team may recommend a special diet.

5. If you smoke, QUIT! It's bad for blood flow, your skin, and your body. Your team will talk to you about options that will help you kick the habit! It's truly one of the best things you can do for your body at any age.

Caring For Your Wound

Here are the steps you'll need to take to properly care for your wound.

Prepare

Get your supplies together and clean a work surface with plenty of room

Wash Hands

- Remove all jewelry and point hands down, under warm water
- Add soap and wash for 15 to 30 seconds, cleaning under your nails
- Rinse and dry well with a clean towel

Removing Dressing

- Carefully loosen the dressing, and pull off gently
- If the dressing sticks, wet the area
- Put old dressing in a plastic bag, and set aside
- Wash your hands AGAIN

Inspect

Inspect wound for any drainage, redness, pain or swelling

Clean Wound

- Fill the syringe with recommended fluid
- Hold 1 to 6 inches away from the wound and spray gently
- Use soft, dry cloth or piece of gauze to pat the wound dry

Apply Dressing

Place and secure the clean dressing onto your wound

Finish

- Throw used supplies into waterproof, tightly closed, double plastic bag
- Wash your hands AGAIN
- Wash any soiled laundry separately

Remember, use a dressing only ONCE and never reuse.

Signs of Trouble

Your wound will change throughout the healing process. Changing your dressing gives you a chance to take a closer look at your wound.

Call your nurse if you see the following changes:

- More redness, pain, swelling, or bleeding.
- The wound is larger or deeper.
- The wound looks dried out or dark.
- The drainage coming from the wound is increasing.
- The drainage coming from the wound becomes thick, tan, green or yellow, or smells bad (pus).
- Your temperature is above 100 °F (37.8 °C) for more than 2 hours.

My Dressing Change

Keep the following list handy and use it to help you remember the types of dressings you will use for your wound and when to change your dressings.

I remove my dressing:	
I clean my wound:	
The 1st dressing I apply:	
The 2nd dressing I apply:	
The 3rd dressing I apply:	
I change my dressings:	
I will call my nurse:	
If my dressing leaks:	

Managing Your Wound

Here are a few scenarios that will help you to judge how your healing is progressing:

Your wound is healthy.

Your wound looks very similar to the last dressing change. There is no redness, inflammation, pain, bleeding and the discharge looks the same. Your wound may look smaller and the discharge may be less.

Your wound may be in trouble, call your nurse.

Your wound looks larger or deeper. There is some redness and it looks swollen. There is no bleeding but the discharge is different, or there is more than usual.

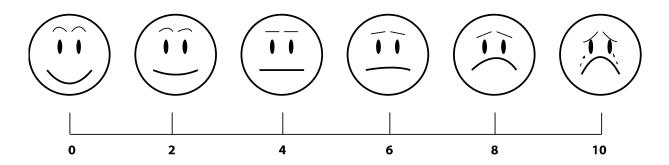

Call your nurse or follow up with your primary care provider. If there is an emergency, call 911.

Your wound looks much larger or deeper. There is redness, swelling and bleeding that isn't stopping. The discharge is very different or there is much more of it. You have pain and a fever.

Daily Activities

Please note the following daily activities:

- Check your dressing daily. Ensure your dressing is dry and stable. Check to see if a dressing change is required.
- Inspect your skin and body.
- Assess your wound for any changes daily or with each dressing change.
- Eat three meals a day based on Canada's Food Guide.
- Assess how you generally feel today.
- Assess your pain level. The scale below may help you to assess your pain level. You may review this with your nurse at appointments.
- Follow your exercise plan.

Red Flags

If you experience any of these, call 911 or go to the emergency room immediately!

- Your temperature is above 100 °F (37.8 °C) for more than 4 hours
- You have difficulty breathing
- You feel confused
- You have fever, chills, or light-headedness
- Your wound is bleeding and does NOT stop

Contact Information
